

Window Roll-Up Module

Operating Instructions

Congratulations on your purchase of the Window Roll-Up Module. Operation is simple: Just arm your car alarm with its remote control. Your car alarm will arm and the power windows will close.

As a safety feature, the module will instantly halt window movement if you remotely disarm the car alarm while the windows are rolling up.

For further safety, the module will ***NOT*** roll up the windows if the alarm *passively* arms. This ensures against accidental window closure if a child or pet is in the vehicle when your car alarm passively arms (if the alarm has this feature).

NOTE: One Window Roll-Up Module can control up to two power windows. Additional modules can be added for remote closing of the rear windows and/or a power sunroof.

CAUTION: Be mindful of children when you arm the alarm (and thus close the power windows).

REMEMBER, you can immediately halt remote window roll-up by disarming your car alarm with its remote control.
